

# Lesson 3 Angles

**ray**- part of a line that extends infinitely in one direction.

**opposite rays** - two rays that have a common endpoint and form a line.

angle - figure formed by two rays with a common endpoint

Names for Angle :

$\angle$  ABC

$\angle$  1

$\angle$  B

**acute angle-** an angle greater than 0 degrees but less than 90

**obtuse angle -** an angle greater than 90 degrees but less than 180 degrees.

**right angle-** an angle equal to 90 degrees

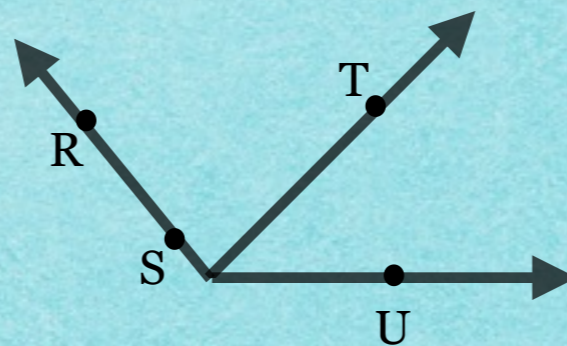

**straight angle-** angle equal to 180 degrees

- A protractor is a tool used to measure angles.
- Angles are measured in degrees.

## Angle Addition Postulate

**Example:** The measure of angle RST = 22 and the measure of angle TSU = 69. Find the measure of angle RSU. Classify the angle

**angle bisector-** ray that divides an angle into two congruent angles.

**Example:** The measure of angle  $ABC = 44$ , ray  $BC$  bisects angle  $ABD$ . The measure of angle  $EBF = 23$ . Find the measure of angle  $CBE$ .
